

Q Create a form with fields like "Name," "Email," and "Password." The goal is to:

1. Validate the input as the user types.
2. Provide instant feedback (e.g., highlight the input field in green if the input is valid, red if it's not).
3. Display a suggestion or message next to the field when the input is invalid.

Name: Looks good!

Email: Valid email!

Password:  Strong password!

Name: Name must be at least 3 characters long.

Email: Please enter a valid email address.

Password:  Password must be at least 6 characters long.
